Subject Index

Abscissic acid
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.
ActA
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Actin
Beta Thymosins as Actin Binding Peptides: SAFER AND NACHMIAS **16**, 473.
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Mechanics of myosin motor: Force and step size: JIANG AND SHEETZ **16**, 531.
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Actin-binding proteins
Beta Thymosins as Actin Binding Peptides: SAFER AND NACHMIAS **16**, 473.
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Activin
Axis determination in *Xenopus*: Gradients and signals: DAWID AND TAIRA **16**, 385.
Borrowing thy neighbour's genetics: neural induction and a *Brachyury* mutant in *Xenopus*: GREEN **16**, 539.
***agouti* gene**
The molecular basis for dominant yellow *agouti* coat color mutations: PERRY, COPELAND AND JENKINS **16**, 705.
Albino mutants
A mouse model for human hereditary tyrosinemia I: HOLDENER AND MAGNUSON **16**, 85
Alu sequences
The human alu SINE sequences - Is there a role for selection in their evolution?: BROOKFIELD **16**, 793.
Ancient DNA
Ancient DNA: Using molecular biology to explore the past: BROWN AND BROWN **16**, 719.
Animal development
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
Antibiotics
Recent trends in rifamycin research: LAL AND LAL **16**, 211.
Antigen processing
Advances in immunology: FLAJNIK **16**, 671.
APC gene
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.
Apoptosis
CED-3 ICE: Evolutionarily conserved regulation of cell death: SCHWARTZ AND OSBORNE **16**, 387.
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
Arabidopsis thaliana
Plant developmental biology: Green genes for the 21st century: MEYEROWITZ **16**, 621.
Arabidopsis thaliana, a plant *Drosophila*: LANGRIDGE **16**, 775.
Archaeology
Ancient DNA: Using molecular biology to explore the past: BROWN AND BROWN **16**, 719.
ARS sequences
The origin replication complex (ORC): The stone that kills two birds: ALMOUZNI **16**, 233.
Arthropod evolution
A good eye for arthropod evolution: OSORIO AND BACON **16**, 419.
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.
Asialoglycoprotein receptor
Galactosyl and N-AcetylGalactosaminyl Homeostasis: A Function for Mammalian Asialoglycoprotein Receptors: WEIGEL **16**, 519.
Aspergillus nidulans
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
Asymmetric cell division
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Atherosclerosis
Atherosclerosis and glycation: COLACO AND ROSER **16**, 145.
August
A Question of History: HAYFLICK **16**, 591.
Autocatalysis
Biological pattern formation: New observations provide support for theoretical predictions: MEINHARDT **16**, 627.
Autophosphorylation
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Auxin
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.
Bacillus subtilis
Microbial adaptation to a changeable environment: Cell-cell interactions mediate physiological and genetic differentiation: ROSENZWEIG AND ADAMS **16**, 715.
Bacteria
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Bacterial development
Spatial cues play a role in the development of *Myxococcus xanthus*: CRAWFORD AND SHIMKETS **16**, 161.
Bacterial pathogenesis
Salmonella: Now you see it, now you don't: STEIN, MILLS, KENNY AND FINLAY **16**, 537.
Bacteriophage Mu
Most of the avian genome appears available for retroviral DNA integration: ENGELMAN **16**, 797.
bacteriophage P1
TKO'ed: Lox, stock and barrel: CHAMBERS **16**, 865.
bcl-2
CED-3 ICE: Evolutionarily conserved regulation of cell death: SCHWARTZ AND OSBORNE **16**, 387.
Beaded chain filaments (BFs)
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
Bee
Bee vision of pattern and 3D: HORRIDGE **16**, 877.
Beta thymosins
Beta Thymosins as Actin Binding Peptides: SAFER AND NACHMIAS **16**, 473.
Biomineralization
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Biosynthetic pathways
Recent trends in rifamycin research: LAL AND LAL **16**, 211.
Recognising the attraction of sugars at the cell surface: COOK **16**, 287.
Biotechnology
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.
Bone
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Brachyury
Borrowing thy neighbour's genetics: neural induction and a *Brachyury* mutant in *Xenopus*: GREEN **16**, 539.
Butterfly wings
Butterfly wings: colour patterns and now gene expression patterns: FRENCH AND MONTEIRO **16**, 789.
c-met receptor
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
c-mos
Unmasking the role of the 3' UTR in the cytoplasmic polyadenylation and translational regulation of maternal mRNAs: WORMINGTON **16**, 533.
c-myc
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
Cadherin
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.
Caenorhabditis elegans
CED-3 ICE: Evolutionarily conserved regulation of cell death: SCHWARTZ AND OSBORNE **16**, 387.
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
MAP kinase function in *C. elegans*: SELFORS AND STERN **16**, 301.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
The cuticle of the nematode *Caenorhabditis elegans*: the role of collagen: JOHNSTONE **16**, 171.
Calcium
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.

The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.

Calcium channels
Cysteine Strings, Calcium Channels and Synaptic Transmission: GANETZKY **16**, 461.

Calmodulin
Taking a long, hard look at calmodulin's warm embrace: TÖRÖK AND WHITAKER **16**, 221.

CaM kinase
Taking a long, hard look at calmodulin's warm embrace: TÖRÖK AND WHITAKER **16**, 221.

Cancer
Cellular epigenetics and the origin of cancer: CUTHILL **16**, 393.
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
DNA repair: looking back and peering forward: FRIEDBERG **16**, 645.
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.

Carcinogenesis
Beta Thymosins as Actin Binding Peptides: SAFER AND NACHMIAS **16**, 473.

Carcinogens
Cellular epigenetics and the origin of cancer: CUTHILL **16**, 393.

Catenin
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.

ced-9
CED-3 ICE: Evolutionarily conserved regulation of cell death: SCHWARTZ AND OSBORNE **16**, 387.

Cell adhesion molecules
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.

Cell cycle
Cell cycle co-ordination after too much rum: CARR **16**, 309.
Mitosis: EARNSHAW AND PLUTA **16**, 639.
Position effect variegation in yeast: TARTOF **16**, 713.
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.

Cell cycle regulation
Cell cycle checkpoints, DNA repair and DNA replication strategies: DOWNES AND WILKINS **16**, 0.

Cell differentiation
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.

Cell labelling
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.

Cell lineage
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.

Cell membrane
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
Subcellular localization and trafficking of the GlUT4 glucose transporter isoform in insulin-responsive cells: HOLMAN AND CUSHMAN **16**, 753.

Cell membranes
Recognising the attraction of sugars at the cell surface: COOK **16**, 287.

Cell migration
Spatial cues play a role in the development of *Myxococcus xanthus*: CRAWFORD AND SHIMKETS **16**, 161.

Cell surface molecules
Galactosyl and N-AcetylGalactosaminyl Homeostasis: A Function for Mammalian Asialoglycoprotein Receptors: WEIGEL **16**, 519.

Cellular differentiation
From embryonal carcinoma cells to neurons: The P19 pathway: BAIN, RAY, YAO AND GOTTLIEB **16**, 343.

Cellular transformation
Cellular epigenetics and the origin of cancer: CUTHILL **16**, 393.

Central nervous system (CNS)
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.

Chaperonins
Finding intermediates in protein folding: BALDWIN **16**, 207.
Molecular chaperones in cellular protein folding: MARTIN AND HARTL **16**, 689.
Reovirus protein σ1: from cell attachment to protein oligomerization and folding mechanisms: LEE AND LEONE **16**, 199.
The chaperonin cycle and protein folding: LUND **16**, 229.

'Checkpoints'
Cell cycle checkpoints, DNA repair and DNA replication strategies: DOWNES AND WILKINS **16**, 71.

Chemoattraction
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.

Chlamydomonas reinhardtii
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.

Chloride channels
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.

Chromatin
Architectural variations of inducible eukaryotic promoters: Preset and remodeling chromatin structures: WALLRATH, LU, GRANOK AND ELGIN **16**, 165.
Chromatin structure and dynamics: TRAVERS **16**, 657.
Intermediate filament and related proteins: potential activators of nucleosomes during transcription initiation and elongation?: TRAUB AND SHOEMAN **16**, 349.
Position effect variegation in yeast: TARTOF **16**, 713.
RNA polymerase: Structural determinant of the chromatin loop and the chromosome: COOK **16**, 425.
The establishment of active promoters in chromatin: BECKER **16**, 541.
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.

Chromatophores
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.

Chromosome movement
Mitosis: EARNSHAW AND PLUTA **16**, 639.

Chromosome pairing
How meiotic cells deal with non-exchange chromosomes: WOLF **16**, 107.
Molecular perspectives of chromosome pairing at meiosis: MOENS **16**, 101.

Chromosome periphery
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.

Chromosome rearrangements
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.

Chromosome scaffold
Mitosis: EARNSHAW AND PLUTA **16**, 639.

Chromosome structure
Molecular perspectives of chromosome pairing at meiosis: MOENS **16**, 101.
The return of copy-choice in DNA recombination: TANG **16**, 785.

Collagen genes
The cuticle of the nematode *Caenorhabditis elegans*: the role of collagen: JOHNSTONE **16**, 171.

Colour triangle
Bee vision of pattern and 3D: HORRIDGE **16**, 877.

Combinatorial signals
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.

Community effect
Vertebrate embryonic inductions: LEMAIRE AND GURDON **16**, 617.

Competence
Microbial adaptation to a changeable environment: Cell-cell interactions mediate physiological and genetic differentiation: ROSENZWEIG AND ADAMS **16**, 715.
Vertebrate embryonic inductions: LEMAIRE AND GURDON **16**, 617.

Confocal microscopy
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.

Contractile force generation
Mechanics of myosin motor: Force and step size: JIANG AND SHEETZ **16**, 531.

Copy-choice recombination
The return of copy-choice in DNA recombination: TANG **16**, 785.

Cruciform DNA
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.

Cruciform structures
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.

Cuticle structure
The cuticle of the nematode *Caenorhabditis elegans*: the role of collagen: JOHNSTONE **16**, 171.

Cyclic AMP
The discovery of protein phosphatases: From chaos and confusion to an understanding of their role in cell regulation and human disease: COHEN **16**, 583.

Cysteine string proteins
Cysteine Strings, Calcium Channels and Synaptic Transmission: GANETZKY **16**, 461.

Cytochrome b
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.
Cytogenetic ladder maps (CLMs)
Mapping in the realm of polyploidy: The wheat model: GILL AND GILL **16**, 841.
Cytogenetics
The evolution of heteromorphic sex chromosomes: LUCCHESI **16**, 81.
The recombination nodule story - seeing what you are looking at: CARPENTER **16**, 69.
Cytokine receptors
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Cytokines
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.
Cytokinesis
Mitosis: EARNSHAW AND PLUTA **16**, 639.
Cytoskeletal remodeling
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Cytoskeleton
Beta Thymosins as Actin Binding Peptides: SAFER AND NACHMIAS **16**, 473.
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47.
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.
3D
Bee vision of pattern and 3D: HORRIDGE **16**, 877.
Dale's principle
A Pattern Confirmed and Refined - Synaptic, Nonsynaptic and Parasynaptic Exocytosis: GOLDING **16**, 503.
Deletion formation
The return of copy-choice in DNA recombination: TANG **16**, 785.
Development
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Pollen maturation: Where ubiquitin is not required?: WORRALL AND TWELL **16**, 873.
Diabetes mellitus
Subcellular localization and trafficking of the GlUT4 glucose transporter isoform in insulin-responsive cells: HOLMAN AND CUSHMAN **16**, 753.
differentiation
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.
Distal-less
Butterfly wings: colour patterns and now gene expression patterns: FRENCH AND MONTEIRO **16**, 789.
DNA chemistry
Ancient DNA: Using molecular biology to explore the past: BROWN AND BROWN **16**, 719.
DNA damage
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
DNA degradation
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
DNA helicases
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
DNA methylation
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
DNA recombination
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
DNA repair
Cell cycle checkpoints, DNA repair and DNA replication strategies: DOWNES AND WILKINS **16**, 75.
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
DNA repair: looking back and peering forward: FRIEDBERG **16**, 645.
Mutation frequency decline revisited: WITKIN **16**, 437.
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
The *RAD6* DNA repair pathway in *Saccharomyces cerevisiae*: what does it do, and how does it do it?: LAWRENCE **16**, 253.
Transcription by RNA polymerase II: A process linked to DNA repair: CHALUT, MONCOLLIN AND EGLY **16**, 651.
DNA replication
Cell cycle checkpoints, DNA repair and DNA replication strategies: DOWNES AND WILKINS **16**, 75.
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
Protein tracking-induced supercoiling of DNA: A tool to regulate DNA transactions *in vivo*?: DRÖGE **16**, 91.
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
The origin replication complex (ORC): The stone that kills two birds: ALMOUZNI **16**, 233.
DNA sequencing
Functional mapping of the human genome by cDNA localization *versus* sequencing: CHEN, D'URSO AND SCHLESSINGER **16**, 693.
Sequencing 5-methylcytosine residues in genomic DNA: GRIGG AND CLARK **16**, 431.
DNA structure
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Protein tracking-induced supercoiling of DNA: A tool to regulate DNA transactions *in vivo*?: DRÖGE **16**, 91.
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.
DNA-binding proteins
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.
Drosophila
Architectural variations of inducible eukaryotic promoters: Preset and remodeling chromatin structures: WALLRATH, LU, GRANOK AND ELGIN **16**, 165.
Cysteine Strings, Calcium Channels and Synaptic Transmission: GANETZKY **16**, 461.
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.
How meiotic cells deal with non-exchange chromosomes: WOLF **16**, 107.
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.
The evolution of heteromorphic sex chromosomes: LUCCHESI **16**, 81.
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.
Drosophila melanogaster
Biological pattern formation: New observations provide support for theoretical predictions: MEINHARDT **16**, 627.
Butterfly wings: colour patterns and now gene expression patterns: FRENCH AND MONTEIRO **16**, 789.
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
Position effect variegation in yeast: TARTOF **16**, 713.
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.
Translational repression as a conserved mechanism for the regulation of embryonic polarity: CURTIS **16**, 709.
Drug design
Recent advances in drug design methods: where will they lead?: DEAN **16**, 683.

Electron transport chain
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.
Embryogenesis
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
Vertebrate embryonic inductions: LEMAIRE AND GURDON **16**, 617.
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Embryonal carcinoma cells
From embryonal carcinoma cells to neurons: The P19 pathway: BAIN, RAY, YAO AND GOTTLIEB **16**, 343.
Embryonic development
Biological actions of IGFs in mammalian development: HEYNER AND GARSIDE **16**, 55.
Radical solutions and cultural problems: Could free oxygen radicals be responsible for the impaired development of preimplantation mammalian embryos: JOHNSON AND NASR-ESFAHANI **16**, 31.
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.
Wnt-1 as a short-range signaling molecule: BURRUS **16**, 155.
Embryonic stem cells
Gene Targeting in the Mouse: MELTON **16**, 633.
Endo-exonucleases
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
Endothelial cells
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.
engrailed
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Enzyme structure
α/β Barrel evolution and the modular assembly of enzymes: Emerging trends in the flavin oxidase/dehydrogenase family: SCRUTTON **16**, 115.
Epithelial cells
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
Salmonella: Now you see it, now you don't: STEIN, MILLS, KENNY AND FINLAY **16**, 537.
Escherichia coli
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
DNA repair: looking back and peering forward: FRIEDBERG **16**, 645.
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Oxygen and the Control of Gene Expression: PAHL AND BAEUERLE **16**, 497.
Recent trends in rifamycin research: LAL AND LAL **16**, 211.
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
The chaperonin cycle and protein folding: LUND **16**, 229.
The *RAD6* DNA repair pathway in *Saccharomyces cerevisiae*: what does it do, and how does it do it?: LAWRENCE **16**, 253.
Evolution
A good eye for arthropod evolution: OSORIO AND BACON **16**, 419.
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
DNA packaging by the lambdoid phages - From pure beginnings to applications in genetic engineering: CASJENS **16**, 847.
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.
Plant developmental biology: Green genes for the 21st century: MEYEROWITZ **16**, 621.
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.
The evolution of heteromorphic sex chromosomes: LUCCHESI **16**, 81.
The pufferfish genome: Small is beautiful?: MILEHAM AND BROWN **16**, 153.
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.
Exocytosis
A Pattern Confirmed and Refined - Synaptic, Nonsynaptic and Parasynaptic Exocytosis: GOLDING **16**, 503.
Exonuclease
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Extracellular matrix (ECM)
Wnt-1 as a short-range signaling molecule: BURRUS **16**, 155.
Eye development
A good eye for arthropod evolution: OSORIO AND BACON **16**, 419.
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
FGF
Borrowing thy neighbour's genetics: neural induction and a *Brachyury* mutant in *Xenopus*: GREEN **16**, 539.
Fibrillarin
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.
Fibroin synthesis
Some genes were isolated and their structure studied before the recombinant DNA era: BROWN **16**, 139.
Fibronectin
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
Filensin
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
Flavin oxidase/dehydrogenase family
α/β Barrel evolution and the modular assembly of enzymes: Emerging trends in the flavin oxidase/dehydrogenase family: SCRUTTON **16**, 115.
Flavonoid biosynthesis
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.
Flower development
Plant developmental biology: Green genes for the 21st century: MEYEROWITZ **16**, 621.
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.
Fluorescence microscopy
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.
fluorescent *in situ* hybridization (FISH)
Choose your partner: Chromosome pairing in yeast meiosis: KLEIN **16**, 869.
FMRFamide
Alternative mRNA splicing of the FMRFamide gene and its role in neuropeptidergic signalling in a defined neural network: BENJAMIN AND BURKE **16**, 335.
Focal adhesions
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.
Fragile X
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
François Jacob
Interview with François Jacob: RYBCHIN **16**, 515.
Free oxygen radicals
Radical solutions and cultural problems: Could free oxygen radicals be responsible for the impaired development of preimplantation mammalian embryos: JOHNSON AND NASR-ESFAHANI **16**, 31.
Fumarylacetoacetate hydrolase (FAH)
A mouse model for human hereditary tyrosinemia I: HOLDENER AND MAGNUSON **16**, 85.
Fungal development
Uncontrolled growth associated with novel somatic recombination in the fungus of Schizophyllum: LEONARD AND DICK **16**, 329.
G proteins
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
Gametogenesis
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
GAP proteins
Regulation of the Ras Signalling Network: MARUT AND BURGESS **16**, 489.
GATA proteins
Transcription Factors and the Regulation of Haemopoiesis: Lessons from GATA and SCL Proteins: BOCKAMP, MCLAUGHLIN, MURRELL AND GREEN **16**, 481.
Gene isolation
Some genes were isolated and their structure studied before the recombinant DNA era: BROWN **16**, 139.

Gene mapping
Functional mapping of the human genome by cDNA localization *versus* sequencing: CHEN, D'URSO AND SCHLESSINGER **16**, 693.
Gene structure
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Mutation frequency decline revisited: WITKIN **16**, 437.
Specificity in splicing: HOLLIDAY AND MURRAY **16**, 771.
The molecular basis for dominant yellow *agouti* coat color mutations: PERRY, COPELAND AND JENKINS **16**, 705.
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.
gene targeting
Gene Targeting in the Mouse: MELTON **16**, 633.
TKO'ed: Lox, stock and barrel: CHAMBERS **16**, 865.
Genetic diseases
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
Genetic engineering
DNA packaging by the lambdoid phages - From pure beginnings to applications in genetic engineering: CASJENS **16**, 847.
Interview with François Jacob: RYBCHIN **16**, 515.
Genetic instability
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Genetic mapping
Mapping in the realm of polyploidy: The wheat model: GILL AND GILL **16**, 841.
Genetic recombination
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
Molecular perspectives of chromosome pairing at meiosis: MOENS **16**, 101.
Protein tracking-induced supercoiling of DNA: A tool to regulate DNA transactions *in vivo*?: DRÖGE **16**, 91.
The recombination nodule story - seeing what you are looking at: CARPENTER **16**, 69.
The return of copy-choice in DNA recombination: TANG **16**, 785.
Genome
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Genome evolution
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.
The human alu SINE sequences - Is there a role for selection in their evolution?: BROOKFIELD **16**, 793.
Genome instability
DNA damage tolerance, mismatch repair and genome instability: KARRAN AND BIGNAMI **16**, 833.
Genome research
Functional mapping of the human genome by cDNA localization *versus* sequencing: CHEN, D'URSO AND SCHLESSINGER **16**, 693.
Mapping in the realm of polyploidy: The wheat model: GILL AND GILL **16**, 841.
The pufferfish genome: Small is beautiful?: MILEHAM AND BROWN **16**, 153.
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
Genome structure
Most of the avian genome appears available for retroviral DNA integration: ENGELMAN **16**, 797.
Germ cell
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
Germ cell development
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.
glp-1
Translational repression as a conserved mechanism for the regulation of embryonic polarity: CURTIS **16**, 709.
Glucocorticoid receptor
The establishment of active promoters in chromatin: BECKER **16**, 541.
Glucocorticoids
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
Glucose transporters
Subcellular localization and trafficking of the GlUT4 glucose transporter isoform in insulin-responsive cells: HOLMAN AND CUSHMAN **16**, 753.
Glycation
Atherosclerosis and glycation: COLACO AND ROSER **16**, 145.
Glycogen metabolism
The discovery of protein phosphatases: From chaos and confusion to an understanding of their role in cell regulation and human disease: COHEN **16**, 583.
Glycoprotein turnover
Galactosyl and N-AcetylGalactosaminyl Homeostasis: A Function for Mammalian Asialoglycoprotein Receptors: WEIGEL **16**, 519.
Glycoproteins
Recognising the attraction of sugars at the cell surface: COOK **16**, 287.
Gonads
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
goosecoid
Axis determination in *Xenopus*: Gradients and signals: DAWID AND TAIRA **16**, 385.
Graduate education
How should we train PhD students in the biosciences?: BARD **16**, 529.
GroEL
Molecular chaperones in cellular protein folding: MARTIN AND HARTL **16**, 689.
Growth control
Uncontrolled growth associated with novel somatic recombination in the fungus of Schizophyllum: LEONARD AND DICK **16**, 329.
Growth factors
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47.
Phosphatidylinositol 3-kinase: KAPELLER AND CANTLEY **16**, 565.
Regulation of the Ras Signalling Network: MARUT AND BURGESS **16**, 489.
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.
GTP-binding proteins
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Guard cells
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.
H19 RNA
H19, a tumour suppressing RNA?: WRANA **16**, 89
Haemopoiesis
Transcription Factors and the Regulation of Haemopoiesis: Lessons from GATA and SCL Proteins: BOCKAMP, MCLAUGHLIN, MURRELL AND GREEN **16**, 481.
Hayflick limit
A Question of History: HAYFLICK **16**, 591.
Hematopoietic cells
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.
Hepatitis C
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
Herpes simplex vectors
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.
Heterochromatin
How meiotic cells deal with non-exchange chromosomes: WOLF **16**, 107.
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.
Histones
The establishment of active promoters in chromatin: BECKER **16**, 541.
HIV
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
HIV infection
Recent trends in rifamycin research: LAL AND LAL **16**, 211.
Hobo elements
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.
Homeosis
Legs or tails: Retinoids and homeosis in frogs: ROWE **16**, 53.
Homologous chromosomes
Choose your partner: Chromosome pairing in yeast meiosis: KLEIN **16**, 869.
Hormonal controls
Hormones, Neuroblasts and the Adult Insect: SHEPHERD **16**, 457.
Host cell invasion
Salmonella: Now you see it, now you don't: STEIN, MILLS, KENNY AND FINLAY **16**, 537.
Howard Temin
Howard Temin - 1934-1994: SUGDEN AND PITOT **16**, 589.
Hox genes
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
Hsp70
Molecular chaperones in cellular protein folding: MARTIN AND HARTL **16**, 689.

Human genetic disorders
Gene Targeting in the Mouse: MELTON **16**, 633.
Humans
The tails of survival curves: SMITH **16**, 907.
Huntingdon's disease (HD)
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
IAP insertions
The molecular basis for dominant yellow *agouti* coat color mutations: PERRY, COPELAND AND JENKINS **16**, 705.
Imaginal discs
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Immune system
Advances in immunology: FLAJNIK **16**, 671.
The Thymus: Maestro of the Immune System: MILLER **16**, 509.
Immunoglobulin rearrangement
Arrested Development: Understanding v-*abl*: KERR **16**, 453.
Imprinting
H19, a tumour suppressing RNA?: WRANA **16**, 89.
Induction
Vertebrate embryonic inductions: LEMAIRE AND GURDON **16**, 617.
Information theory
What is information for molecular biology?: WORRALL **16**, 373.
Insect development
Hormones, Neuroblasts and the Adult Insect: SHEPHERD **16**, 457.
Insulin receptor
Subcellular localization and trafficking of the GlUT4 glucose transporter isoform in insulin-responsive cells: HOLMAN AND CUSHMAN **16**, 753.
Insulin-like growth factors (IGFs)
Biological actions of IGFs in mammalian development: HEYNER AND GARSIDE **16**, 55.
Integrins
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
Intercellular signalling
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
Spatial cues play a role in the development of *Myxococcus xanthus*: CRAWFORD AND SHIMKETS **16**, 161.
Interferon
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Intermediate filament proteins
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
Intermediate filaments
Intermediate filament and related proteins: potential activators of nucleosomes during transcription initiation and elongation?: TRAUB AND SHOEMAN **16**, 349.
Ion channel proteins
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
Jacob
Interview with François Jacob: RYBCHIN **16**, 515.
JAK kinases
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Kinesin
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Laminin
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
Laser scanning confocal microscopy (LSCM)
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.
Leech development
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Lens proteins
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 413.
Leukaemia
The Thymus: Maestro of the Immune System: MILLER **16**, 509.
Transcription Factors and the Regulation of Haemopoiesis: Lessons from GATA and SCL Proteins: BOCKAMP, MCLAUGHLIN, MURRELL AND GREEN **16**, 481.
Limb bud development
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
Limb development
Biological pattern formation: New observations provide support for theoretical predictions: MEINHARDT **16**, 627.
Lipid peroxidation
Reactive oxygen species generation and human spermatozoa: The balance of benefit and risk: AITKEN AND FISHER **16**, 259.
Listeria monocytogenes
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Locomotion
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Longevity
The tails of survival curves: SMITH **16**, 907.
Low density lipoprotein (LDL)
Atherosclerosis and glycation: COLACO AND ROSER **16**, 145.
Lymphocytes
Arrested Development: Understanding v-*abl*: KERR **16**, 453.
Advances in immunology: FLAJNIK **16**, 671.
The Thymus: Maestro of the Immune System: MILLER **16**, 509.
Maillard reaction
Atherosclerosis and glycation: COLACO AND ROSER **16**, 145.
Maize
Pollen maturation: Where ubiquitin is not required?: WORRALL AND TWELL **16**, 873.
Major Histocompatibility Complex (MHC)
Advances in immunology: FLAJNIK **16**, 671.
Mammalian development
Biological actions of IGFs in mammalian development: HEYNER AND GARSIDE **16**, 55.
Galactosyl and N-AcetylGalactosaminyl Homeostasis: A Function for Mammalian Asialoglycoprotein Receptors: WEIGEL **16**, 519.
H19, a tumour suppressing RNA?: WRANA **16**, 89.
Radical solutions and cultural problems: Could free oxygen radicals be responsible for the impaired development of preimplantation mammalian embryos: JOHNSON AND NASR-ESFAHANI **16**, 31.
MAP kinases
Cellular Mechanisms of signal transduction for neurotrophins: SALTIEL AND DECKER **16**, 405.
MAP kinase function in *C. elegans*: SELFORS AND STERN **16**, 301.
Meiosis
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
Choose your partner: Chromosome pairing in yeast meiosis: KLEIN **16**, 869.
How meiotic cells deal with non-exchange chromosomes: WOLF **16**, 107.
Molecular perspectives of chromosome pairing at meiosis: MOENS **16**, 101.
Membrane proteins
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.
Membrane ruffling
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Mesenchymal-epithelial cell transition
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
Mesoderm
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
Mesoderm induction
Noggin - The neural inducer or modifier of neural induction?: SHARPE **16**, 159.
Metabolism
Arabidopsis thaliana, a plant *Drosophila*: LANGRIDGE **16**, 775.
Metazoa
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
Methylation
Sequencing 5-methylcytosine residues in genomic DNA: GRIGG AND CLARK **16**, 431.
Microbial development
Microbial adaptation to a changeable environment: Cell-cell interactions mediate physiological and genetic differentiation: ROSENZWEIG AND ADAMS **16**, 715.
Microtubule motors
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Mitochondria
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
Mitogenesis
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
Mitosis
Cell cycle co-ordination after too much rum: CARR **16**, 309.
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Mitosis: EARNSHAW AND PLUTA **16**, 639.
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.
Molecular clock
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.

Molecular evolution
α/β Barrel evolution and the modular assembly of enzymes: Emerging trends in the flavin oxidase/dehydrogenase family: SCRUTTON **16**, 115.
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.
The human alu SINE sequences - Is there a role for selection in their evolution?: BROOKFIELD **16**, 793.
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
Molecular structure
Recent advances in drug design methods: where will they lead?: DEAN **16**, 683.
Mortality
The tails of survival curves: SMITH **16**, 907.
Mouse development
Gene Targeting in the Mouse: MELTON **16**, 633.
Mouse genetics
The molecular basis for dominant yellow *agouti* coat color mutations: PERRY, COPELAND AND JENKINS **16**, 705.
Mouse models
A mouse model for human hereditary tyrosinemia I: HOLDENER AND MAGNUSON **16**, 85.
mRNA splicing
Alternative mRNA splicing of the FMRFamide gene and its role in neuropeptidergic signalling in a defined neural network: BENJAMIN AND BURKE **16**, 335.
Mutagenesis
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
Mutation frequency decline
Mutation frequency decline revisited: WITKIN **16**, 437
Mutations (temporal and cell-restricted)
TKO'ed: Lox, stock and barrel: CHAMBERS **16**, 865.
Mycobacterium
Recent trends in rifamycin research: LAL AND LAL **16**, 211.
Myosin
Mechanics of myosin motor: Force and step size: JIANG AND SHEETZ **16**, 531.
Myotonic dystrophy (MD)
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
Myxococcus xanthus
Microbial adaptation to a changeable environment: Cell-cell interactions mediate physiological and genetic differentiation: ROSENZWEIG AND ADAMS **16**, 715.
Spatial cues play a role in the development of *Myxococcus xanthus*: CRAWFORD AND SHIMKETS **16**, 161.
N-CAM
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.
N-formylmethionyl peptides
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
NADPH oxidase
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.
nanos
Translational repression as a conserved mechanism for the regulation of embryonic polarity: CURTIS **16**, 709.
Nematode development
The cuticle of the nematode *Caenorhabditis elegans*: the role of collagen: JOHNSTONE **16**, 171.
Nervous system disorders
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.
Neural circuitry
A good eye for arthropod evolution: OSORIO AND BACON **16**, 419.
Alternative mRNA splicing of the FMRFamide gene and its role in neuropeptidergic signalling in a defined neural network: BENJAMIN AND BURKE **16**, 335.
Neural development
A good eye for arthropod evolution: OSORIO AND BACON **16**, 419.
Borrowing thy neighbour's genetics: neural induction and a *Brachyury* mutant in *Xenopus*: GREEN **16**, 539.
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
Hormones, Neuroblasts and the Adult Insect: SHEPHERD **16**, 457.
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.
Neural induction
Noggin - The neural inducer or modifier of neural induction?: SHARPE **16**, 159.
Neural transplantation
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.
Neurogenesis
Hormones, Neuroblasts and the Adult Insect: SHEPHERD **16**, 457.
Neuronal development
From embryonal carcinoma cells to neurons: The P19 pathway: BAIN, RAY, YAO AND GOTTLIEB **16**, 343.
Neuronal glycine receptor
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.
Neuronal signalling
Alternative mRNA splicing of the FMRFamide gene and its role in neuropeptidergic signalling in a defined neural network: BENJAMIN AND BURKE **16**, 335.
Neuropeptides
A Pattern Confirmed and Refined - Synaptic, Nonsynaptic and Parasynaptic Exocytosis: GOLDING **16**, 503.
Alternative mRNA splicing of the FMRFamide gene and its role in neuropeptidergic signalling in a defined neural network: BENJAMIN AND BURKE **16**, 335.
Neurospora crassa
Endo-exonucleases: Enzymes involved in DNA repair and cell death?: FRASER **16**, 761.
Neurotransmitters
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.
Neurotrophins
Cellular Mechanisms of signal transduction for neurotrophins: SALTIEL AND DECKER **16**, 405.
Neutrophils
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
Reactive oxygen species generation and human spermatozoa: The balance of benefit and risk: AITKEN AND FISHER **16**, 259.
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.
NF-κB
Arrested Development: Understanding v-*abl*: KERR **16**, 453.
Oxygen and the Control of Gene Expression: PAHL AND BAEUERLE **16**, 497.
Noggin
Noggin - The neural inducer or modifier of neural induction?: SHARPE **16**, 159.
Nuclear matrix
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.
Nuclear proteins
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.
Nuclear structure
Intermediate filament and related proteins: potential activators of nucleosomes during transcription initiation and elongation?: TRAUB AND SHOEMAN **16**, 349.
Mitosis: EARNSHAW AND PLUTA **16**, 639.
RNA polymerase: Structural determinant of the chromatin loop and the chromosome: COOK **16**, 425.
Nucleolar structure
RNA polymerase: Structural determinant of the chromatin loop and the chromosome: COOK **16**, 425
Nucleosomes
Architectural variations of inducible eukaryotic promoters: Preset and remodeling chromatin structures: WALLRATH, LU, GRANOK AND ELGIN **16**, 165.
Chromatin structure and dynamics: TRAVERS **16**, 657.
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.
Oocyte maturation
Unmasking the role of the 3' UTR in the cytoplasmic polyadenylation and translational regulation of maternal mRNAs: WORMINGTON **16**, 533.
Oocytes
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.
Organelle transport
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Orientation
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Origin of life
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.
What is information for molecular biology?: WORRALL **16**, 373.
Origin Replication Complex (ORC)
The origin replication complex (ORC): The stone that kills two birds: ALMOUZNI **16**, 233.

SUBJECT INDEX

Osteopontin
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Outliers
The tails of survival curves: SMITH **16**, 907.
Oxidative stress
Oxygen and the Control of Gene Expression: PAHL AND BAEUERLE **16**, 497.
Reactive oxygen species generation and human spermatozoa: The balance of benefit and risk: AITKEN AND FISHER **16**, 259.
P elements
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.
p53 protein
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
Pair-rule genes
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.
Palindromes
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.
Pathogen
Dynamic remodeling of the actin cytoskeleton: Lessons learned from *Listeria* locomotion: SOUTHWICK AND PURICH **16**, 885.
Pattern formation
Biological pattern formation: New observations provide support for theoretical predictions: MEINHARDT **16**, 627.
Butterfly wings: colour patterns and now gene expression patterns: FRENCH AND MONTEIRO **16**, 789.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.
Translational repression as a conserved mechanism for the regulation of embryonic polarity: CURTIS **16**, 709.
Patterns
Bee vision of pattern and 3D: HORRIDGE **16**, 877.
Paxillin
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47.
Peptidomimetics
Recent advances in drug design methods: where will they lead?: DEAN **16**, 683.
Phage lambda
DNA packaging by the lambdoid phages - From pure beginnings to applications in genetic engineering: CASJENS **16**, 847.
Phakinin
The beaded intermediate filaments and their potential functions in eye lens: GEORGATOS, GOUNARI AND REMINGTON **16**, 0413
Phenotypes
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.
Phosphatases
The discovery of protein phosphatases: From chaos and confusion to an understanding of their role in cell regulation and human disease: COHEN **16**, 583.
Phosphatidylinositol-3-kinase
Phosphatidylinositol 3-kinase: KAPELLER AND CANTLEY **16**, 565.
Phosphoinositides
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.
Phospholipid metabolism
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Phosphorylation
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Phosphotransferase systems
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.
Phylogenies
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
Physiological imaging
To boldly glow.... Applications of laser scanning confocal microscopy in developmental biology: PADDOCK **16**, 357.
Phytochrome
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.
Plant cells
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.
Plant developmental biology: Green genes for the 21st century: MEYEROWITZ **16**, 621.
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.
Arabidopsis thaliana, a plant *Drosophila*: LANGRIDGE **16**, 775.
Plant metabolism
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.
Plant pathogenesis
Oxygen and the Control of Gene Expression: PAHL AND BAEUERLE **16**, 497.
Plant-microbe interactions
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.
Plasmodesmata
Plant developmental biology: Green genes for the 21st century: MEYEROWITZ **16**, 621.
Polarity
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Pollen
Pollen maturation: Where ubiquitin is not required?: WORRALL AND TWELL **16**, 873.
Polyadenylation
Unmasking the role of the 3′ UTR in the cytoplasmic polyadenylation and translational regulation of maternal mRNAs: WORMINGTON **16**, 533.
Polyaspartic acid motif
The roles of autophosphorylation and phosphorylation in the life of osteopontin: SAAVEDRA **16**, 913.
Polyphosphoinositides
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Population
The tails of survival curves: SMITH **16**, 907.
Position effect variegation
Position effect variegation in yeast: TARTOF **16**, 713.
Position-effect variegation
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.
Positional information
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.
Precis coenia
Butterfly wings: colour patterns and now gene expression patterns: FRENCH AND MONTEIRO **16**, 789.
Prehistoric migrations
Ancient DNA: Using molecular biology to explore the past: BROWN AND BROWN **16**, 719.
Profilin
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Promoter structure
The establishment of active promoters in chromatin: BECKER **16**, 541.
Promoters
Architectural variations of inducible eukaryotic promoters: Preset and remodeling chromatin structures: WALLRATH, LU, GRANOK AND ELGIN **16**, 165.
Protein folding
Finding intermediates in protein folding: BALDWIN **16**, 207.
Molecular chaperones in cellular protein folding: MARTIN AND -ULRICH HARTL **16**, 689.
Protein kinases
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.
Arrested Development: Understanding v-*abl*: KERR **16**, 453.
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
Subcellular localization and trafficking of the GlUT4 glucose transporter isoform in insulin-responsive cells: HOLMAN AND CUSHMAN **16**, 753.
Protein phosphorylation
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Regulation of organelle transport: Lessons from color change in fish: HAIMO AND THALER **16**, 727.
The discovery of protein phosphatases: From chaos and confusion to an understanding of their role in cell regulation and human disease: COHEN **16**, 583.
Protein structure
α/β Barrel evolution and the modular assembly of enzymes: Emerging trends in the flavin oxidase/dehydrogenase family: SCRUTTON **16**, 115.
Finding intermediates in protein folding: BALDWIN **16**, 207.
Intermediate filament and related proteins: potential activators of nucleosomes during transcription initiation and elongation?: TRAUB AND SHOEMAN **16**, 349.
Phosphatidylinositol 3-kinase: KAPELLER AND CANTLEY **16**, 565.
Reovirus protein σ1: from cell attachment to protein oligomerization and folding mechanisms: LEE AND LEONE **16**, 199.
Taking a long, hard look at calmodulin's warm embrace: TÖRÖK AND WHITAKER **16**, 221.
The chaperonin cycle and protein folding: LUND **16**, 229.

The cuticle of the nematode *Caenorhabditis elegans*: the role of collagen: JOHNSTONE **16**, 171.
The discovery of protein phosphatases: From chaos and confusion to an understanding of their role in cell regulation and human disease: COHEN **16**, 583.
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.

Proteoglycans
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.

Protozoa
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.

Pufferfish
The pufferfish genome: Small is beautiful?: MILEHAM AND BROWN **16**, 153.

Rac
Membrane ruffling and signal transduction: RIDLEY **16**, 321.

RAD6
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.

***RAD6* pathway**
The *RAD6* DNA repair pathway in *Saccharomyces cerevisiae*: what does it do, and how does it do it?: LAWRENCE **16**, 253.

Raf kinase
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.

Rana temporaria
Legs or tails: Retinoids and homeosis in frogs: ROWE **16**, 53.

Ras proteins
MAP kinase function in *C. elegans*: SELFORS AND STERN **16**, 301.
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Profilin: At the Crossroads of Signal Transduction and the Actin Cytoskeleton: SOHN AND GOLDSCHMIDT-CLERMONT **16**, 465.
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
Regulation of the Ras Signalling Network: MARUT AND BURGESS **16**, 489.
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.

Reactive oxygen species (ROS)
Reactive oxygen species generation and human spermatozoa: The balance of benefit and risk: AITKEN AND FISHER **16**, 259.

Recombinant DNA studies
Some genes were isolated and their structure studied before the recombinant DNA era: BROWN **16**, 139.

Recombination
Choose your partner: Chromosome pairing in yeast meiosis: KLEIN **16**, 869.

Recombination nodules
The recombination nodule story - seeing what you are looking at: CARPENTER **16**, 69.

Regulatory factors
Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.

Regulatory networks
The flavonoid biosynthetic pathway in plants: function and evolution: KOES, QUATTROCCHIO AND MOL **16**, 123.

Reovirus
Reovirus protein σ1: from cell attachment to protein oligomerization and folding mechanisms: LEE AND LEONE **16**, 199.

Repair
Long DNA palindromes, cruciform structures, genetic instability and secondary structure repair: LEACH **16**, 893.

Replication origins
The origin replication complex (ORC): The stone that kills two birds: ALMOUZNI **16**, 233.

Restriction enzymes
Sequencing 5-methylcytosine residues in genomic DNA: GRIGG **16**, 431

Retinoic acid
Legs or tails: Retinoids and homeosis in frogs: ROWE **16**, 53.
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.

Retinoic acid receptors (RARs)
From embryonal carcinoma cells to neurons: The P19 pathway: BAIN, RAY, YAO AND GOTTLIEB **16**, 343.

Retinotectal topography
The molecular basis of retinotectal topography: KAPRIELIAN AND PATTERSON **16**, 1.

Retroviral integration
Most of the avian genome appears available for retroviral DNA integration: ENGELMAN **16**, 797.

Retrovirus vectors
Nervous system modification by transplants and gene transfer: DOERING **16**, 825.

Retroviruses
Howard Temin - 1934-1994: SUGDEN AND PITOT **16**, 589.

Ribonucleoproteins (RNPs)
The chromosome periphery during mitosis: HERNANDEZ-VERDUN AND GAUTIER **16**, 179.

Ribosomal DNA
Some genes were isolated and their structure studied before the recombinant DNA era: BROWN **16**, 139.

Ribosomal proteins
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.

Rifamycin
Recent trends in rifamycin research: LAL AND LAL **16**, 211.

RNA polymerase
RNA polymerase: Structural determinant of the chromatin loop and the chromosome: COOK **16**, 425.
Transcription by RNA polymerase II: A process linked to DNA repair: CHALUT, MONCOLLIN AND EGLY **16**, 651.

RNA structure
Specificity in splicing: HOLLIDAY AND MURRAY **16**, 771.

RNA-binding proteins
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.

Saccharomyces cerevisiae
Choose your partner: Chromosome pairing in yeast meiosis: KLEIN **16**, 869.
DNA helicases: Enzymes with essential roles in all aspects of DNA metabolism: MATSON, BEAN AND GEORGE **16**, 13.
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Position effect variegation in yeast: TARTOF **16**, 713.
Roadblocks and detours during DNA replication: Mechanisms of mutagenesis in mammalian cells: NAEGELI **16**, 557.
The *RAD6* DNA repair pathway in *Saccharomyces cerevisiae*: what does it do, and how does it do it?: LAWRENCE **16**, 253.

Salmonella typhimurium
Oxygen and the Control of Gene Expression: PAHL AND BAEUERLE **16**, 497.
Salmonella: Now you see it, now you don't: STEIN, MILLS, KENNY AND FINLAY **16**, 537.

Schizophyllum commune
Uncontrolled growth associated with novel somatic recombination in the fungus of Schizophyllum: LEONARD AND DICK **16**, 329.

Schizosaccharomyces pombe
Cell cycle co-ordination after too much *rum*: CARR **16**, 309.

SCL protein
Transcription Factors and the Regulation of Haemopoiesis: Lessons from GATA and SCL Proteins: BOCKAMP, MCLAUGHLIN, MURRELL AND GREEN **16**, 481.

Sea urchins
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.

Segmentation
Biological pattern formation: New observations provide support for theoretical predictions: MEINHARDT **16**, 627.
Leech segmentation: A molecular perspective: SHANKLAND **16**, 801.
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.

Selectins
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.

***sevenless* (sev)**
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.

Sex chromosomes
The evolution of heteromorphic sex chromosomes: LUCCHESI **16**, 81.

Sex determination
The evolution of heteromorphic sex chromosomes: LUCCHESI **16**, 81.
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.

Sexualization
A parallel between development and evolution: Germ cell recruitment by the gonads: DENIS **16**, 933.

Sialic acid
Recognising the attraction of sugars at the cell surface: COOK **16**, 287.

Sigma 1 protein
Reovirus protein σ1: from cell attachment to protein oligomerization and folding mechanisms: LEE AND LEONE **16**, 199.

Signal
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.

Signal transduction
A decade of plant signals: GILROY AND TREWAVAS **16**, 677.

Cell polarity and the mechanism of asymmetric cell division: WAY, WANG, RUN AND HUNG **16**, 925.
Cellular Mechanisms of signal transduction for neurotrophins: SALTIEL AND DECKER **16**, 405.
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Growth factors as survival factors: regulation of apoptosis: COLLINS, PERKINS, RODRIGUEZ-TARDUCHY, NIELO AND LOPEZ-RIVAS **16**, 133.
MAP kinase function in *C. elegans*: SELFORS AND STERN **16**, 301.
Membrane ruffling and signal transduction: RIDLEY **16**, 321.
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
Molecular biology of embryonic development: How far have we come in the last ten years?: DAVIDSON **16**, 603.
Neutrophil chemoattractant receptors and the membrane skeleton: KLOTZ AND JESAITIS **16**, 193.
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47
Phosphatidylinositol 3-kinase: KAPELLER AND CANTLEY **16**, 565.
Ras regulatory interactions: novel targets for anti-cancer intervention?: PRENDERGAST AND GIBBS **16**, 187.
Regulation of the Ras Signalling Network: MARUT AND BURGESS **16**, 489.
Signaling mechanisms in induction of the R7 photoreceptor in the developing *Drosophila* retina: YAMAMOTO **16**, 237.
Taking a long, hard look at calmodulin's warm embrace: TÖRÖK AND WHITAKER **16**, 221.
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.
The impact of molecular biology on models for cell adhesion: HYNES **16**, 663.
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.
Wnt-1 as a short-range signaling molecule: BURRUS **16**, 155.

SINE elements
The human alu SINE sequences - Is there a role for selection in their evolution?: BROOKFIELD **16**, 793.

Site-specific recombination
TKO'ed: Lox, stock and barrel: CHAMBERS **16**, 865.

Sonic hedgehog
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.

Spemann organizer
Axis determination in *Xenopus*: Gradients and signals: DAWID AND TAIRA **16**, 385.

Spermatozoa
Reactive oxygen species generation and human spermatozoa: The balance of benefit and risk: AITKEN AND FISHER **16**, 259.

Splicing
Specificity in splicing: HOLLIDAY AND MURRAY **16**, 771.
The inhibitory neuronal glycine receptor: BÉCHADE, SUR AND TRILLER **16**, 735.

Sporulation
Microbial adaptation to a changeable environment: Cell-cell interactions mediate physiological and genetic differentiation: ROSENZWEIG AND ADAMS **16**, 715.
Uncontrolled growth associated with novel somatic recombination in the fungus of Schizophyllum: LEONARD AND DICK **16**, 329.

Src homology domains
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.

Stomata
Why do plants have phosphoinositides?: COTE AND CRAIN **16**, 39.

Stress responses
Radical solutions and cultural problems: Could free oxygen radicals be responsible for the impaired development of preimplantation mammalian embryos: JOHNSON AND NASR-ESFAHANI **16**, 31.

Supercoiling
Protein tracking-induced supercoiling of DNA: A tool to regulate DNA transactions *in vivo*?: DRÖGE **16**, 91.

Superoxide
The regulation of superoxide production by the NADPH oxidase of neutrophils and other mammalian cells: JONES **16**, 919.

Survival curves
The tails of survival curves: SMITH **16**, 907.

Synapses
A Pattern Confirmed and Refined - Synaptic, Nonsynaptic and Parasynaptic Exocytosis: GOLDING **16**, 503.

Synaptic transmission
Cysteine Strings, Calcium Channels and Synaptic Transmission: GANETZKY **16**, 461.

Synaptinemal complex
How meiotic cells deal with non-exchange chromosomes: WOLF **16**, 107.
Molecular perspectives of chromosome pairing at meiosis: MOENS **16**, 101.
The recombination nodule story - seeing what you are looking at: CARPENTER **16**, 69.

T cell receptor
Advances in immunology: FLAJNIK **16**, 671.

Telomeres
Position effect variegation in yeast: TARTOF **16**, 713.

Temin
Howard Temin - 1934-1994: SUGDEN AND PITOT **16**, 589.

Tensin
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.

Tetrahymena
Tetrahymena: a model for growth, cell cycle and nutritional studies, with biotechnological potential: WHEATLEY, RASMUSSEN AND TIEDTKE **16**, 367.

TFIIIA
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.

TGF-beta proteins
Vertebrate embryonic inductions: LEMAIRE AND GURDON **16**, 617.

Therapeutic intervention
Differentiation of endothelial cells: Analysis of the constitutive and activated endothelial cell phenotypes: AUGUSTIN, KOZIAN AND JOHNSON **16**, 901.

Thymus
The Thymus: Maestro of the Immune System: MILLER **16**, 509.

Thyroid hormone
Legs or tails: Retinoids and homeosis in frogs: ROWE **16**, 53.

Transcription factor complexes
Arrested Development: Understanding v-*abl*: KERR **16**, 453.

Transcription factors
Chromatin structure and dynamics: TRAVERS **16**, 657.
Transcription by RNA polymerase II: A process linked to DNA repair: CHALUT, MONCOLLIN AND EGLY **16**, 651.

Transcription-repair coupling factor
Mutation frequency decline revisited: WITKIN **16**, 437.

Transcriptional regulation
Architectural variations of inducible eukaryotic promoters: Preset and remodeling chromatin structures: WALLRATH, LU, GRANOK AND ELGIN **16**, 165.
Cell cycle checkpoints, DNA repair and DNA replication strategies: DOWNES AND WILKINS **16**, 75.
Chromatin structure and dynamics: TRAVERS **16**, 657.
DNA repair: looking back and peering forward: FRIEDBERG **16**, 645.
Intermediate filament and related proteins: potential activators of nucleosomes during transcription initiation and elongation?: TRAUB AND SHOEMAN **16**, 349.
Protein tracking-induced supercoiling of DNA: A tool to regulate DNA transactions *in vivo*?: DRÖGE **16**, 91.
RNA polymerase: Structural determinant of the chromatin loop and the chromosome: COOK **16**, 425.
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.
The establishment of active promoters in chromatin: BECKER **16**, 541.
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.
Transcription by RNA polymerase II: A process linked to DNA repair: CHALUT, MONCOLLIN AND EGLY **16**, 651.
Transcription Factors and the Regulation of Haemopoiesis: Lessons from GATA and SCL Proteins: BOCKAMP, MCLAUGHLIN, MURRELL AND GREEN **16**, 481.
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.

Transcriptional silencing
The origin replication complex (ORC): The stone that kills two birds: ALMOUZNI **16**, 233.

Translational control
Mitogenesis and protein synthesis: A role for ribosomal protein S6 phosphorylation?: STEWART AND THOMAS **16**, 809.
Translational repression as a conserved mechanism for the regulation of embryonic polarity: CURTIS **16**, 709.
Unmasking the role of the 3′ UTR in the cytoplasmic polyadenylation and translational regulation of maternal mRNAs: WORMINGTON **16**, 533.

Transporter proteins
Convergence and divergence in the evolution of transport proteins: SAIER JR **16**, 23.

Transposable elements
Gross chromosome rearrangements mediated by transposable elements in *Drosophila melanogaster*: LIM AND SIMMONS **16**, 269.
Molecular evolution: codes, clocks, genes and genomes: MACINTYRE **16**, 699.
Uncontrolled growth associated with novel somatic recombination in the fungus of Schizophyllum: LEONARD AND DICK **16**, 329.

Tribolium
Segmentation in insects: How singular is *Drosophila*?: KLINGLER **16**, 391.

Trinucleotide repeat expansions
Trinucleotide repeat expansions and human genetic disease: BATES AND LEHRACH **16**, 277.
Triticum aestivum
Mapping in the realm of polyploidy: The wheat model: GILL AND GILL **16**, 841.
***trk* receptors**
Cellular Mechanisms of signal transduction for neurotrophins: SALTIEL AND DECKER **16**, 405.
Tumour suppressor gene
H19, a tumour suppressing RNA?: WRANA **16**, 89.
Tumour suppressors
The tumour suppressor APC gene product is associated with cell adhesion: BURCHILL **16**, 225.
Tyrosine kinases
Cellular Mechanisms of signal transduction for neurotrophins: SALTIEL AND DECKER **16**, 405.
Cytokine signal transduction and the JAK family of protein tyrosine kinases: WILKS AND HARPUR **16**, 313.
Mesenchymal-epithelial transitions: BIRCHMEIER AND BIRCHMEIER **16**, 305.
Paxillin: A cytoskeletal target for tyrosine kinases: TURNER **16**, 47.
Phosphatidylinositol 3-kinase: KAPELLER AND CANTLEY **16**, 565.
Regulation of the Ras Signalling Network: MARUT AND BURGESS **16**, 489.
Tyrosinemia
A mouse model for human hereditary tyrosinemia I: HOLDENER AND MAGNUSON **16**, 85.
Ubiquitin (UBQ)
Pollen maturation: Where ubiquitin is not required?: WORRALL AND TWELL **16**, 873.
Ubiquitinated proteins
Pollen maturation: Where ubiquitin is not required?: WORRALL AND TWELL **16**, 873.
Ubiquitination
The *RAD6* DNA repair pathway in *Saccharomyces cerevisiae*: what does it do, and how does it do it?: LAWRENCE **16**, 253.
v-*abl*
Arrested Development: Understanding v-*abl*: KERR **16**, 453.
Vertebrate development
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
Vinculin
Tensin: A potential link between the cytoskeleton and signal transduction: LO, WEISBERG AND CHEN **16**, 817.
Viral assembly
DNA packaging by the lambdoid phages - From pure beginnings to applications in genetic engineering: CASJENS **16**, 847.
Viral infection
Reovirus protein σ1: from cell attachment to protein oligomerization and folding mechanisms: LEE AND LEONE **16**, 347.
Viral phylogenies
Model phylogenies to explain the real world: HARVEY, HOLMES AND NEE **16**, 767.
Visual discrimination
Bee vision of pattern and 3D: HORRIDGE **16**, 877.
Vitalism
What is information for molecular biology?: WORRALL **16**, 373.
Weissman
A Question of History: HAYFLICK **16**, 591.
Wheat
Mapping in the realm of polyploidy: The wheat model: GILL AND GILL **16**, 841.
Wingless (wg)
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
***Wnt* genes**
Wnt-1 as a short-range signaling molecule: BURRUS **16**, 155.
Drosophila Wingless: A paradigm for the function and mechanism of Wnt signaling: SIEGFRIED AND PERRIMON **16**, 395.
Xanthine oxidase
Radical solutions and cultural problems: Could free oxygen radicals be responsible for the impaired development of preimplantation mammalian embryos: JOHNSON AND NASR-ESFAHANI **16**, 31.
Xenopus
Borrowing thy neighbour's genetics: neural induction and a *Brachyury* mutant in *Xenopus*: GREEN **16**, 539.
Combinatorial signaling in development: CORNELL AND KIMELMAN **16**, 577.
Unmasking the role of the 3' UTR in the cytoplasmic polyadenylation and translational regulation of maternal mRNAs: WORMINGTON **16**, 533.
Xenopus laevis
Axis determination in *Xenopus*: Gradients and signals: DAWID AND TAIRA **16**, 385.
Noggin - The neural inducer or modifier of neural induction?: SHARPE **16**, 159.
Some genes were isolated and their structure studied before the recombinant DNA era: BROWN **16**, 139.
Xeroderma pigmentosum
DNA repair: looking back and peering forward: FRIEDBERG **16**, 645.
Y-box proteins
Structural and functional properties of the evolutionarily ancient Y-box family of nucleic acid binding proteins: WOLFFE **16**, 245.
Yolk protein genes
The regulation of the yolk protein genes, a family of sex differentiation genes in *Drosophila melanogaster*: BOWNES **16**, 745.
Z-DNA
Unusual DNA structures, chromatin and transcription: VAN HOLDE AND ZLATANOVA **16**, 59.
Zebrafish
More to patterning than *Sonic hedgehog*: POWNALL **16**, 381.
***zeste-white* interaction**
white gene expression, repressive chromatin domains and homeotic gene regulation in *Drosophila*: PIRROTTA AND RASTELLI **16**, 549.
